Objective: Power BI Desktop, Cloud Service and End to End Workflow.
Topic: Filtering Data.
Exercise: Create a slicer and chart to choose which whale sightings dataset to see.

- Create a new Power BI Desktop file, and load into it sightings of whales and porpoises from the Whale and Dolphin Trust.
- Create a slicer based on the data allowing you to choose the species sighted.

- Now add a chart comparing sightings by month, but restrict this by choosing the slicer species shown.
