Objective: Power BI Desktop, Cloud Service and End to End Workflow.
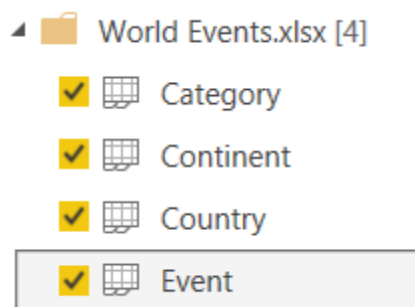

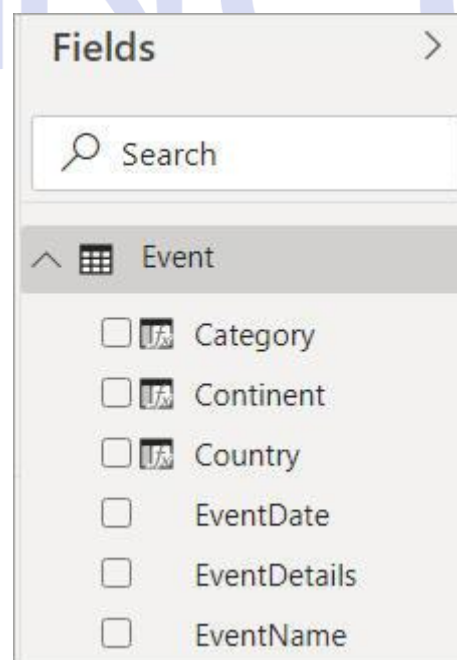

Topic: Calculated Columns.

Exercise: Use the RELATED function to combine fields from four tables.

- Create a new Power BI report and load the data from the Excel file provided.

- In model view, create the obvious relationships between the tables.
- Using the RELATED function, create calculated columns in the Event table to bring in the country, continent and category for each event to get this:

- Create a matrix to show the number of events and continent.
